

SoGEA

What is it exactly?

Single Order Generic Ethernet Access.
Simplified, this means you can now have
broadband without having to pay
for the line rental.

SoGEA

The benefits?

There are cost savings associated with SoGEA, plus the way in which you order is simpler than before, saving you time and effort.

SoGEA

Why has it been developed?

It's all centred around the big 2025 PSTN and ISDN switch off, which is already happening across parts of the country.

This means that connectivity will no longer be supported by traditional copper telephone lines. The future is stand-alone broadband, the likes of SoGEA.

SoGEA

What is the difference?

Unlike previous solutions, with SoGEA, you can have a line just for broadband. This allows consumers to use a VoIP based solution rather than traditional copper-based networks which will soon be retired.

SoGEA

Still have questions around
SoGEA?

That's exactly what we are here for, to do our job so you're free to do yours. We're ready to help, get in touch today to speak to one of our experts on how we can support you.
